ROTAX ACE™ 4-STROKE ENGINES

With the Advanced Combustion Efficiency (ACE) family of engines, BRP engineers optimized the combustion system, reduced mechanical friction, and freed intake and exhaust breathing. The result is the most efficient engine in snowmobiling. Not only are they efficient, they're a pleasure to operate and own. Very little maintenance is required; they run smoothly and produce a nice, solid – yet quiet – sound.

INTELLIGENT THROTTLE CONTROL

Standard on the ACE engines, the iTC™ system delivers a whole different snowmobiling experience.

- **Driving Modes:** A button on the console enables you to select one of three driving modes. Standard mode ensures a smooth start and linear acceleration; Sport enables full performance and quicker acceleration; ECO® limits top speed and acceleration rates for a more relaxed, fuel-conserving ride.
- **Finger Throttle:** The throttle block can be rotated forward for use as a finger throttle, if preferred. Great for changing hand positions on a long ride and for more control through bumps.

¹ Observed metric horsepower based on internal dyno test performed in optimal conditions.

² Data based on internal engineering trail testing.

³ Data based on internal engineering trail testing in ECO mode.

⁴ Based on retail sale results as of December 31, 2019.

Experience the advantage of XPS. Oil and care products engineered to extend the life of your ride, tested in the world's harshest conditions, and designed to optimize your vehicle's performance. Learn more at XPSlubricants.com.

STACKABLE LinQ DECK ACCESSORY COMPATIBILITY CHART

Level up and double your storage with the Stackable LinQ Deck. Carries up to 50 lb (22 kg) of gear by duplicating positions 1 and 2 of the tunnel area 14.75" (375 mm) above it. The composite construction uses steel, aluminum and polypropylene in a robust design for long life. When the secure latch system is released, the deck is held open by a gas strut for easy access to the cargo below it. Depending on seat configuration, accessories can be left on the deck when opening.

LED SIGNAL LIGHTS

Shedding light on a new, innovative way to communicate with fellow riders on the trail. The LED Signal Lights keep your hands on the handlebars — where they should be. These lights are compatible with many models, stay visible in daylight and give peace of mind and control to all riders. The future of snowmobile communication is here to brighten your adventures.

HANDS-ON COMMUNICATION: HOW IT WORKS

Integrated in the handguard or windshield side deflectors of the sled, the LED Signal Lights use white, amber and green to create four modes and messages to oncoming riders. Whether you want to alert others that more riders are coming, that you're the lone rider, that a hazardous situation is looming or that you're last in the group, all you need is LED Signal Lights. Keeping your hands on the handlebars of your sled creates a safer riding environment for everyone, where messages are clear and all are in control.

LED Signal Lights for Windshield (860202703) are available for windshields! If you're riding with a medium or a higher windshield, you can use this communication system too. Install it on Windshield Side Deflector Kits for medium and higher windshields to communicate with other trail riders in an innovative and confident way.

// SKIS

Skis make all the difference in getting your sled to handle just how you like. We offer eight different styles of skis for you to choose from. Which one is right for you? Here are some tips on choosing the right one:

PLATFORMS: REV GEN5 / REV GEN4 / XP / XR / XU / XS / XM / REV	TOURING			PILOT 5.7 SL 2 carbides/ski	• Lightweight single or dual runner skis provide effortless steering at low speeds and constant grip without compromise at higher speeds. • Standard use is one carbide runner—add a second to reduce darting. • Great all-around trail performance.
	UTILITY			PILOT 7.4 1 carbide/ski	• Specifically designed for utility purposes. • Deeper keels allow more control while towing. • Increased tip-up rear end for better reverse capability. • 1" wider than Pilot DS-2 for improved flotation in deep snow. • More aggressive cornering while keeping a light steering feeling.
	TRAIL SPORT			PILOT 5.7 1 or 2 carbides/ski****	• Lightweight single or dual runner skis provide effortless steering at low speeds and constant grip without compromise at higher speeds. • Standard use is one carbide runner—add a second to reduce darting. • Great all-around trail performance.
				PILOT X 1 carbide/ski	• Completely redesigned from Pilot 5.7 with a new structural topside for 10% more rigidity. • 31 mm longer keel with a new shape reduces darting. • Adds 10% more lateral surface area and blends more smoothly with a new carbide. • 11 degree reduction in approach angle.
				PILOT TX 1 carbide/ski	• Improved to better match the REV Gen4 features. • Redesigned top side for increased rigidity. • 20 mm shorter overall length and more dramatic tip-up at the rear. • 63 mm longer runner plate increases lateral surface for more effective cornering. • Smoother front approach angle to reduce darting even further.
	TRAIL PERFORMANCE			PILOT R 1 carbide/ski	• Straight from the MXZ X 600RS race sled. • Very aggressive profile for sharp handling. • Lightweight with high rigidity. • Proven on the ISOC race circuit.
	DEEP SNOW			PILOT DS-2 1 carbide/ski	• Evolution of the DS with a deeper and shorter keel. • Increased agility and less effort than the original. • Great all-around ski for deep snow use. • Standard on mountain sleds with 2.5" lug tracks and utility sleds.
				PILOT DS-3 REV Gen4*** 1 carbide/ski	• Deep snow ski designed to match the latest 3" lug and longer tracks. • 0.47" (12 mm) deeper keel than DS-2. • Works well for aggressive riders using the biggest tracks.
				PILOT DS-4 1 carbide/ski	• 2-stage keel design improves flotation. • Entire keel has been moved forward with a revised rear portion for improved consistency in deep snow and straighter tracking in rough conditions.
				PILOT RX 2 carbides/ski	• Remarkable cornering predictability in various snow conditions and exceptional control in loose snow.

Does not fit REV Gen4. *Fits only REV Gen4. ****Second carbide can be added to ski by drilling marked additional holes.

Note: The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of maneuverability, acceleration and braking. Please refer to your Operators Guide for more details.

WHEELS & SLIDER SHOES

SLIDER WITH VESPEL[†] INSERTS	All models with 163" and longer tunnels	503194816	
	All models with 154" and super short tunnels	503194815	
 • Uses DuPont Vespel inserts for less friction. • Can be cut to desired length. • Better fuel efficiency, more power and increased vehicle speed due to reduced friction between the track clips and slides. • Reduced need for maintenance and associated costs. • Extended life due to enhanced wear characteristics of Vespel polyamide over incumbent UHMW PE. • Allows riders to operate sleds in less than acceptable snow and trail conditions since water from snow is not needed for lubricity as with incumbent UHMW PE slide rails.			

SLIDER SHOES

- Custom color-matched slider shoes with built-in wear marker.
- Long-lasting, impact-resistant.

MAVERICK		Pilot X, Pilot 5.7 SL, Pilot 5.7, Pil39.99	860202677 – 6"
			860202678 – 8"
Performance	●●●●●	- Aggressive, hourglass profile host bar that digs deep and turns hard in a wide variety of conditions. - Available in 6–8" of cutting carbides to accommodate unstudded to heavily studded sleds. - Hardweld is also added in the high wear areas to prolong runners' life. - Sold in pairs.	
Ease of Steering	●●●●●

		Pilot X, Pilot 5.7, Pilot DS, Pilot DS-2, Pilot DS-3 Skis	860202558 – 6"
			860202559 – 8"
Performance	●●●●●	- This dual carbide runner has two single runners mounted to a steel plate, producing a total of four contact lines on the terrain. - These four blades with 60° carbide drastically reduce darting as they carve through existing grooves from single runners. - This design spreads the PSI across two points, which extends the life of the runner and eases steering. - When turning, only one blade per dual runner will contact the terrain, acting like a pair of single runners. - Available with 4", 6" and 8" carbide per blade; exceptions exist for runners with short lengths. - Sold individually.

Performance	●●●●●	- These carbide runners are the tallest in the industry and have a narrow, rectangular profile for aggressive turning capabilities. - The 60° turning carbides, available in 6" and 8", have been strategically placed to protect the runner and reduce darting by carving through existing grooves. - Work great on crossovers and in deep snow. - Steel bars from excessive wear. - Sold in pairs.

To install the studs, always use the installation tools, procedures and torque specified in the instructions. Proper installation provides maximum product longevity and helps prevent track damage. BRP recommends that studs be installed by authorized BRP dealers and on approved pre-patterned tracks only. These tracks come standard on most Ski-Doo snowmobiles. Look for this symbol on your track. Woody's products are designed to fit and interact with each other. The stud nut and support plate form a complete unit. The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of maneuverability, acceleration and braking. Please refer to your Operators Guide for more details.

WHAT MAKES BRP DRIVE BELTS STAND OUT?

PERFECTLY ENGINEERED FOR YOUR RIDE

BRP drive belts are developed alongside each vehicle to perfectly match drivetrain calibration and deliver maximum performance. Designed, tested and manufactured to rigorous specifications, BRP drive belts also deliver superior throttle response and no RPM loss.

PROVEN WINNERS

In addition to the countless hours of dyno and physical field-testing we do on every drive belt, we go racing, where every component is stressed to the maximum. For years, Ski-Doo racers have been winning countless events across the globe. Underneath all the trophies and champagne? A BRP drive belt.

ADVENTURE WITH CONFIDENCE

Performance means little without durability, and our manufacturing consistency assures you'll get the most out of every adventure. Extra miles equal extra memories, and BRP drive belts are engineered to deliver maximum longevity for your ride.

SUPERIOR CONSTRUCTION

- 1** Adhesion layers. These promote adhesion from the cogged undercord compound to the aramid cord.
- 2** The top cog adds strength and reduces belt deformation. It's typically made with a different compound than the lower cog nearest the clutch center as the two are designed to perform different tasks in transferring power to the track.
- 3** BRP belts use tensile cord made with lightweight, high-strength, high-resistance Aramid fibers. Each tensile cord layer in BRP belts is specific to the diameter required by the power and performance needs of your vehicle.
- 4** The undercord compound is a carefully curated compound of both natural and synthetic rubbers and high-performance materials. Intentionally designed for the proper flex and engagement profile of your clutch pulleys.
- 5** Specially designed impregnated fabric provides additional wear resistance to both the belt and your clutches.

CVT MAINTENANCE PARTS

PERFORMANCE DRIVE BELTS

- High performance drive belts calibrated to maximize your sled's performance.
- Aramid tensile cords used in construction for extra long life and dependability, also deliver a consistent length with minimal belt shrinkage and minimal length adjustments.
- High tensile reinforced fiber elastomer undercords provide minimal dusting and long term flex life.
- Flexweave overcord for superior adhesion and crack resistance.
- Consistent performance during life of belt.
- Quality you can count on for optimum performance.
- Built with distinctive durability features for mountain, trail or fast tracks.

ROLLERS

Longer life span

- **45%** stronger under high-impact forces when compared to the fiber-type rollers.

Unmatched performance

- **65%** less deformation than thermoplastic-polymer-type of rollers. Deformation can seize the rollers, which impacts the performance and the functionality of the pulley, which may lead to premature belt failure and overall decrease in vehicle performance.

Reliable and durable

- High impact resistance, extending reliability and operating life of the rollers.

sympatex®

More than a membrane

// 3 LAYERS

Full mobility and freedom of movement are a given with our Sympatex membrane. With a 3D optimized fit and coupled with our 3-layer lightweight stretch, it delivers comfort at every turn.

// TECHNOLOGY WITH AN EDGE

DYNAMIC BREATHABILITY WITH SYMPATEX®

In contrast to other membrane technologies, the poreless compact Sympatex membrane is based on a physical and chemical principle. The water-attracting (hydrophilic) part of the membrane absorbs the moisture from the body and emits it to the outside by evaporation. The water vapor molecules are transported outwards along the hydrophilic molecular chains. The molecular structure (hydrophilic components) of the Sympatex membrane swells with moisture and therefore provides space for water transport and fast evaporation.

 **100% WATERPROOF**

 **100% WINDPROOF**

 **OPTIMALLY BREATHABLE**

 **DURABLE**

 **RECYCLABLE AND RECYCLED**

 **PTFE-FREE**
